

Oggie's AI Project Inventory

Offline re-entry guide, reconstructed August 14, 2026

Best place to restart: Mission Control contains the most recent interrupted coding work. Operations Briefing, UFO Intel Dashboard, and YouTube Pipeline are the projects explicitly marked active in the AgentOS ledger. The larger goal is to make Mission Control the daily operational home for the whole AI ecosystem.

Highest-priority work

1. Mission Control INTERRUPTED WORK

Operations dashboard for agents, missions, Ideas and To-Dos, project knowledge, and homelab health. Completed work includes the mission Kanban, archive, automatic Hermes dispatcher, stale-run recovery, editing and cancellation, the Idea to To-Do to Mission lifecycle, AgentOS library, and system monitoring.

Likely next work: finish the UFO Readiness and Ops Action Queue integrations currently present as uncommitted changes; then consider failed-mission retries, Duplicate and Run Now actions, project metadata, agent detail pages, and the command palette.

2. Operations Briefing ACTIVE

Daily dashboard over four Gmail accounts, intended to become Mission Control's Operations page. The Briefing Engine creates frozen-schema artifacts and the renderer presents them. Slices 1 and 2 are complete. Remaining work is accessibility and polish, followed by the Mission Control port. The last recorded operational blocker was unavailable Gmail connections.

3. UFO Intel Dashboard ACTIVE

Mint-side UFO data visualizer and HTML generator. It consumes the daily gatherer and reports, refreshes the UFO Network dashboard, and prepares the frontend visualization layer for the two-site publishing system.

4. YouTube Pipeline ACTIVE

Local transcription and content-repurposing pipeline. An offline, review-only content-kit MVP exists for saved transcripts and Keep notes.

Core AI ecosystem

5. AgentOS

Canonical shared memory and governance system for your agents: project registry, decisions, knowledge, mission debriefs, agent registry, homelab registry, and cross-agent history.

6. Graphify

Knowledge-graph layer over AgentOS content, producing graph data, reports, and visualizations.

7. Hermes Desktop

Desktop and session-management work, including recovered sessions, pinned conversations, and compression-lineage handling.

8. Hermes Reminders

Hermes scheduler and reminder-reliability work.

9. Hermes Gmail and Composio

Connection between Hermes and Gmail through Composio.

UFO publishing ecosystem

10. UFO Network

Umbrella project for two UFO news sites plus Mint-side content collection. Production copies live on the Mac Mini.

11. UFO Readiness Gate

Read-only PASS, WARN, or BLOCK check for source health, Hugo build freshness, content changes, and Git state.

12. UFO Editorial Queue

Routes collected material between the two sites, identifies duplicates, and applies verification labels.

13. UFO Ingestion Truth

Checks whether the ingestion pipeline's reported state agrees with its actual artifacts and results.

14. UFO CMS Handoff

Packages or validates the handoff from Mint-side gathering to the CMS and publishing side.

15. UFO Intel Dashboard

The active visualization project described in the priority section.

Operations and reliability automation

16. Ops Action Queue

Durable operator inbox with opened, acknowledged, reopened, priority-change, resolved, and machine-readable events.

17. Project Action Reconciler

Compares project-memory next steps with actual AgentOS and Hermes task stores to expose missing tracking.

18. Project Next Action

Produces a ranked queue from the newest project-memory next steps.

19. Project Portfolio Index

Local project inventory and indexing utility. Present on disk, but not clearly represented in the main ledger.

20. Artifact SLA Monitor

Detects stale or missing operational artifacts using explicit age limits.

21. Cron Truth Auditor

Checks whether scheduled jobs are actually running and whether their reported state is truthful.

22. Note and Idea Radar

Scans notes for ideas or actions that have not been captured properly.

23. Ideas and To-Do Ingestion

Brings external ideas and tasks into the AgentOS and Mission Control lifecycle.

24. Obsidian Sync Check

Monitors or verifies Obsidian synchronization. This has the newest project-memory update, dated August 14.

25. Recurring Cost Ledger

Tracks recurring services and costs.

26. Git Backup Guardian

Checks Git backup safety. Present locally but not well documented in the main ledger.

27. Ops Change Digest and Ops Runbook Generator

Utilities for summarizing system changes and generating operational documentation.

Homelab and personal infrastructure

28. Homelab Heartbeat

Service-health monitor with web dashboard, JSON output, and SQLite history.

29. Homelab Health Check

Health reporting across services, storage, networking, Docker, and remote systems.

30. Homelab Services

Docker, Portainer, Plex, Sonarr, Radarr, SABnzbd, and related Ubuntu server infrastructure.

31. Homelab Morning Brief

Daily Markdown and JSON briefing combining Nextcloud ideas, AgentOS projects, Docker state, and the UFO pipeline.

32. OggiesCloud and Nextcloud

Your personal Nextcloud deployment and supporting operations.

33. Vaultwarden

Password-manager hosting and migration or removal work. Backups are preserved in AgentOS.

34. Mac Mini Guardian, Mac Bridge, and Mac Orchestrator

Monitoring and coordination tools for the Mac Mini side of the environment.

35. OBS Stream Manager

Streaming and OBS automation tooling.

36. N8N Automation

Local automation workspace.

Websites and content

37. cash4cams.net

Adult webcam affiliate site with blog content and program reviews.

38. alanogden.com

Your personal website.

39. citystgeorge

St. George, Utah tourism site covering parks, dining, events, and advertising.

40. Gaming Content Engine

Gaming-news RSS ingestion, X posting, and weekly newsletter automation.

41. Gaming X Poster and Gaming Bot

Supporting tools for gaming-news social posting.

42. games.oggiedoggie.net

Larger games portal and repository containing several individual game projects.

Games

43. Last City Museum

Destiny-history fan museum browser game with collectibles and mini-games.

44. Last City Museum 1P

First-person raycasting version with NPCs, dialogue, objectives, timeline hallway, and collectibles.

45. DiceTavern

Fantasy tavern dice-combat game.

46. Emberwild: Elemental Duel

Elemental card game with a 54-card deck and AI opponent.

47. Acey-Deucey

Navy backgammon variant for the browser and Linux desktop, with a tested rules engine and persistent bankroll.

48. Grimhand: The Endless Deck

Fantasy dungeon crawler and card game with secrets, rumors, stamina combat, and persistent-world elements.

49. Oggie's Blackjack Table

Dependency-free blackjack game with passing tests and a private GitHub repository.

50. Crossword Math

Android arithmetic-crossword game. Core milestones, 38 unit tests, and emulator smoke testing were complete. A signed release and Samsung-device testing remained.

51. Dinosaur and Unicorn Coloring Apps

Older Cordova-style mobile and web projects still present locally.

Other apps and utilities

52. Oggie's Local Send

Rust and GTK LAN file-sharing app with QR codes. Core, HTTP server, service layer, UI, and 56 tests were complete. Phone smoke testing and packaging remained.

53. ApplImage Manager

Linux ApplImage-management application.

54. ImageConvert

Image-conversion utility with scripts and packaging work.

55. YouTube-to-Facebook and yt2fb

Older YouTube-to-Facebook repurposing or publishing project.

56. Thumbnail Pipeline

Local thumbnail-generation workflow.

57. Filler Cut

Likely video-editing automation. Present locally but not sufficiently documented.

58. ComfyUI Validator and Wiring Validator

Tools for validating ComfyUI setups or workflow wiring.

59. MedCheck

Local project whose scope is not documented clearly in the main ledger.

60. Pip-Boy, Ovid, SGF26, Morning Intel, Productivity, and homelab helpers NEEDS REVIEW

These folders exist locally, but there is not enough durable project memory to describe them confidently.

Suggested restart order

1. Resume and finish the interrupted Mission Control integrations.
 2. Restore Gmail connectivity and finish Operations Briefing.
 3. Continue the UFO dashboard and publishing toolchain.
 4. Finish one nearly shippable standalone project, preferably Crossword Math or Oggie's Local Send.
 5. Use Ops Action Queue and Project Action Reconciler to turn everything else into a manageable backlog.
